

Silicone Super Absorbent Dressing

Healing Phase

1

2

3

4

Absorbency

Protective Backing

- ▶ Prevents strike through
- ▶ Traps wound exudate in SAP
- ▶ Water proof & bacteria barrier

Super Absorbent Core

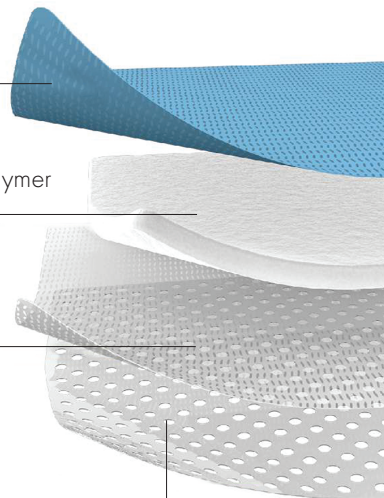

- ▶ Exceptional capacity of Super Absorbent Polymer
- ▶ Helps minimize maceration risk
- ▶ Forms gel to build up fluid locking system

Conformable Wicking Layer

- ▶ Rapid exudate wicking
- ▶ Helps protect fragile tissues
- ▶ Offers patient comfort
- ▶ Will not stick to the wound

OptiSil Silicone Wound Contact Layer

- ▶ Self-developed silicone oil and perforation technology
- ▶ Distributes wound exudate fast and evenly

An excellent dressing for use on heavily exudative wounds. The moisture locking system ensures that exudates are secured within the dressing, reducing the possibility of maceration.

- Excellent exudate management
- Outstanding fluid control
- Non strike-through with bacteria-proof backing
- Minimises the risk of maceration and leakage
- Silicone contact layer for comfort and pain free removal

Absorbency

Protective Backing

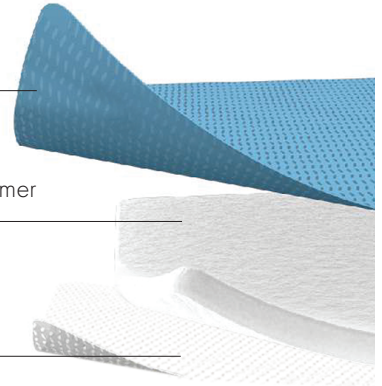

- ▶ Prevents strike through
- ▶ Traps wound exudate in SAP
- ▶ Water proof & bacteria barrier

Super Absorbent Core

- ▶ Exceptional capacity of Super Absorbent Polymer
- ▶ Helps minimize maceration risk
- ▶ Forms gel to build up fluid locking system

Conformable Wicking Layer

- ▶ Rapid exudate wicking
- ▶ Helps protect fragile tissues
- ▶ Offers patient comfort
- ▶ Will not stick to the wound

An excellent dressing for use on heavily exudative wounds. The dressing consists of a breathable and waterproof nonwoven backing, a super absorbent pad layer and a hydro-penetrating contact layer. The moisture locking system ensures that exudates are secured within the dressing, reducing the possibility of maceration.

- Excellent exudate management
- Outstanding fluid control
- Non strike-through with bacteria-proof backing
- Minimises the risk of maceration and leakage
